Know! The Impact of Marijuana on Adolescents

“13 Did that which is good, then, become death to me? By no means! Nevertheless, in order that sin might be recognized as sin, it used what is good to bring about my death, so that through the commandment sin might become utterly sinful.

14 We know that the law is spiritual; but I am unspiritual, sold as a slave to sin. 15 I do not understand what I do. For what I want to do I do not do, but what I hate I do. 16 And if I do what I do not want to do, I agree that the law is good. 17 As it is, it is no longer I myself who do it, but it is sin living in me. 18 For I know that good itself does not dwell in me, that is, in my sinful nature.[a] For I have the desire to do what is good, but I cannot carry it out. 19 For I do not do the good I want to do, but the evil I do not want to do—this I keep on doing. 20 Now if I do what I do not want to do, it is no longer I who do it, but it is sin living in me that does it.” Romans 7:13-20

“We are the New Americana, getting high on legal marijuana,” are the lyrics to a popular new song by 21-year-old singer/songwriter ‘Halsey.’ Her song reflects the unfortunate reality of the world our children are growing up in, as marijuana becomes not only legal, but socially acceptable in more and more states. It would be only natural for young people to assume that if all these adults have fought for or are fighting for marijuana to be legalized, then the drug itself must be pretty harmless.

This assumption is incorrect and dangerous. While marijuana use is risky for people of all ages, it is especially hazardous for youth. Here’s why:

Marijuana impacts the developing adolescent brain:

- Studies show that chronic (and sometimes casual) marijuana use during adolescence can actually change the physical shape, volume and density of a person’s brain, negatively impacting learning and memory. The severity of such brain abnormalities is shown to increase as frequency of use increases.
- Heavy use of marijuana during adolescence may also reduce a person’s IQ by as much as 8 points. A loss of 8 points could drop a person of average intelligence into the lowest third of the intelligence range.

Talk early and often about alcohol, tobacco and other drugs. Even when it gets tough.

Empowering Parents To Raise Their Children To Be Substance-Free

Marijuana impacts school performance:

- Research consistently shows that marijuana users earn lower grades, are more likely to skip classes, have higher incidences of school suspension/expulsion and higher dropout rates, and are subsequently more likely in adulthood to experience unemployment, social welfare dependence and dissatisfaction in quality of life.

Marijuana impacts health and safety:

- Marijuana use has the potential to increase heart rate, cause lung and breathing problems, and is linked to anxiety, depression and suicidal thoughts among youth.
- Marijuana affects a person's coordination, balance, reaction time, alertness and ability to concentrate – increasing one's risk for accidental injury and death.
- Because the adolescent brain has not yet matured, many young people have a tendency to act on impulse, without regard for risk. Adding marijuana to the mix only increases the likelihood of poor decision-making, including engaging in risky sexual behaviors, getting into a car with an impaired driver, or taking part in a criminal act.

If the risks of marijuana continue to be downplayed by adults, there is a greater likelihood of more youth, including our sons and daughters, giving this drug a try. Young people must be made aware that marijuana is not harmless; that use of this drug causes people to think and behave differently; that marijuana negatively impacts brain function, intelligence, school performance and health and safety; and that marijuana use not only threatens success in the present, but jeopardizes a hopeful future.
